

Due to the superior content offered by XM radio, we listen exclusively to XM radio while in our cars. It would provide a higher level of safety to us to have access to local alerts including homeland security, weather and traffic other than the general information provided through the audio feed of Fox News. Competition is what has made the United States the greatest nation on earth, do not stifle it.

In addition, I would like to receive local television audio feed through XM radio. I don't know if XM can engineer this, but it would be helpful to tap in to the audio of local TV channels as we travel cross country.
